Primera DMC – A world of precision

Large area seed drill | 4,200 l – 13,000 l | 3 m – 12 m

Flexible pressurised tank system for Direct, Mulch and Conventional sowing

Thanks to the pressurised tank, which is divided into four parts with a total of 13,000 l capacity, the Primera DMC in 9 m and 12 m working widths enables versatile, high-precision sowing. This enables the dispensation of fertiliser to optimally support plants in their early development, as well as various seed types for undersowing in a single-shoot process.

Accurate metering

Electric metering and a large selection of metering rollers enable versatile, high-precision sowing with seed rates of 2 to 400 kg/ha, as well as at high driving speeds.

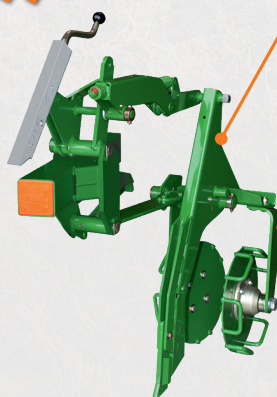

SmartFarming 4.0

- GPS-Track – your parallel guidance aid the field
- GPS-Maps – sow using application maps
- GPS-Switch – automatic half-side shut-off

4-row coulter unit

The chisel opener units are arranged on longitudinal cross members in four rows, which results in a large distance from one to the other and ensures good straw passage.

The AMAZONE chisel opener – 100% tried and tested!

The chisel openers are individually suspended on parallelogram linkages for optimal, high-precision seed placement. This enables extremely even field emergence at speeds up to 18 km/h. The narrow chisel opener opens the seed furrow with very little soil movement, while generating fine soil.

Hoop rings with reflex discs ensure excellent depth control and seed coverage during direct and mulch sowing.

AmaTron 4
ISOBUS terminal

Also compatible with liquid fertiliser Cart FDC 6000
