Precea – A world of precision

Precision air seeder | 950 l – 1,250 l | 3 m – 4.5 m | 4 – 8 rows

» Preci fertiliser metering

The Preci metering system provides the Precea with precise and effective fertiliser metering. The electric drive enables very easy adjustment and calibration. A stream of air conveys the fertiliser to the FerTeC Twin fertiliser couler.

» Singling – precise and quick

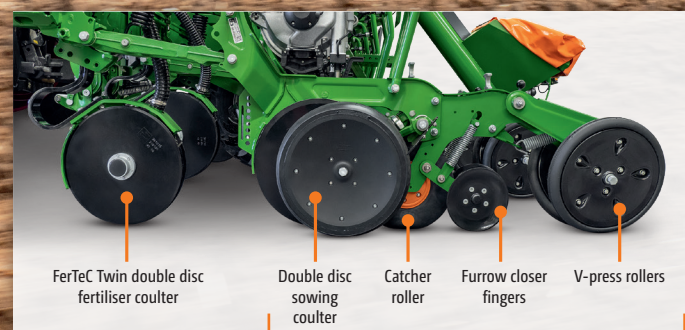

The over-pressure singling system ensures precise singling of various seed types at driving speeds of up to 15 km/h.

» ElectricDrive for part-area specific work

The electric drive of the seed singling system ensures a high level of precision. The application rate of the seed and fertiliser can therefore be automatically tailored to the conditions via application maps. Comfortable calibration at the touch of a button is also possible.

» SmartControl

The SmartControl stripper finger adjustment automatically re-adjusts the stripper finger position as required, meaning that it is tailored to the seed at all times and misses or doubles are prevented.

» Precise and quick – The PreTeC sowing couler system

The combination of double disc sowing couler and furrow former ensures precise seed placement in a perfectly cleared and pre-consolidated seed furrow. The catcher roller presses the grain into the seed row with excellent soil contact for optimum placement, before the closed seed row is then completely reconsolidated by the press rollers.
