

**Contractual conditions concerning the manufacturer guarantee against perforation corrosion for the model series, ZA-TS, ZA-V and ZG-TS which fall within the contractual warranty period from 01/01/2023.**

Visual, superficial defects caused by corrosion are excluded from the manufacturer guarantee against perforation corrosion, even if they cover large areas. The manufacturer's guarantee against perforation corrosion can be applied for within the contractual warranty period of usually 12 months after the installation date of the new machine. The manufacturer guarantee period against perforation corrosion shall commence the first time the spreader is used.

After use, the AMAZONE machine must be cleaned thoroughly and protected. Outside the period of use, it must be parked in premises that preserve it and protect it from the weather. The machine must be stored away for the winter according to the specifications of the operating instructions.

The manufacturer guarantee against perforation corrosion shall come into force if:

1. any corrosion that has occurred has reached a level that causes severe weakening of the frame structure and/or the hopper, or complete perforation corrosion.
2. the machine constitutes a hazard to road safety and the machine's operator.
3. the machine's functionality can no longer be guaranteed due to corrosion damage on the machine's metal structure.
