

AMAZONE

Catros 03

Smart Frame System

IDEAS FOR
OUR FUTURE

Simple and uncomplicated setting and adjustment of the working depth

- ✓ Completely independent depth adjustment of the front tools and the main working element
- ✓ The first and second row of discs always work at the same depth
- ✓ Convenient for quick changes to the working depth, such as working deeper in tramlines or on the headland

Huge through-passage, always perfectly adapted to the working depth

- ✓ The distance between the discs and the main frame automatically increases the deeper you work. When the working depth is increased, the discs are turned away from both the frame and the following roller.
