

AMAZONE

Catros 03 Knife roller

The combination of Catros and knife roller makes it possible to carry out extremely shallow soil tillage together with maximum crushing of the stubble, such as that initial stubble cultivation after rape.

IDEAS FOR
OUR FUTURE

Knife roller

- ✓ Optimum shredding results due to the high circumferential speed with a roller diameter of 330 mm
- ✓ Excellent contour following thanks to individual roller sections
- ✓ No lateral pull during work, as the blades are arranged on the roller in a V-profile
- ✓ Maintenance-free bearings with a long service life thanks to a metallic face seal
- ✓ Insensitive to stones and dirt due to the enclosed design of the roller centre shaft
- ✓ Wear costs halved thanks to reversible knives with two cutting edges, made of tempered drill steel
